PROFESSIONAL SUMMARY

Fullstack with 8+ years building scalable web applications using PHP (Laravel), Node.js, JavaScript (Vue.js,React), and Java. Skilled in full-stack development, REST API design, streaming platforms, CI/CD, and MySQL optimization. Experienced in production AI agents with LangGraph, LLM tool-calling, Redis caching, and Linux deployment.

Technologies: Nest.js, Next.js, PHP, Laravel, Lumen, Node.js, JavaScript, Vue.js, Vuex, Inertia.js, React.js, Java, MySQL, Redis, WebSockets, Eloquent, Queues, Ionic, PouchDB, Meilisearch, Elasticsearch, Docker, Scout,TMDB, Vuetify, RESTful APIs, AWS, Linux.

Tools & Integrations: Git, Stripe, PayPal, ZATCA, fatoora, Moyasar payment gateway, Taqnyat SMS gateway, Firebase, AWS S3, Amazon SES, Cloudflare, Sentry, Algolia, Socket.io, ollama, BunnyCDN,Linux, Nginx, OpenAI, Claude code, Codex, Cursor IDE, DNS, FTP, server-side deployment and management.

CORE COMPETENCIES

- Build high-performance web and desktop applications with Node.js, Next.js, Nest.js, PHP, Laravel, Vue.js, and React. Scalable solutions that meet client requirements and improve operational efficiency.
- Design and ship production AI assistants with Python, LangGraph, FastAPI, and Docker. Expertise in managing and optimizing MySQL databases through database normalization, stored procedure creation, and query optimization, indexes, significantly improving system performance and data accuracy.
- Skilled in developing, maintaining, and troubleshooting Node.js, Php, Laravel, Vue.js, websites, including frontend customization, library integration, third party API usage, and regular updates to ensure optimal performance and user experience.
- Demonstrated ability to collaborate with cross-functional teams to deliver complex projects, handle multiple tasks simultaneously, and lead teams to achieve development goals within set timelines, improving project efficiency by 15%.
- Ability to to handle Linux servers to deploy projects, Setting up logs for server resource usage which helps to reduce server crash incidents by 28%.

WORK EXPERIENCE

Senior Full Stack Developer **06/2026 – Present**

Tamakan (Saudi Arabia, Riyadh)

I lead full-stack development of Keeld, a bilingual (Arabic/English) multi-vendor marketplace and payments platform for Saudi merchants, along with its Flutter mobile app. I build the NestJS backend, the Next.js web app and the APIs the mobile app uses. I also handle payment, e-invoicing and shipping integrations, financial settlements and production deployment with Docker.

- Designed and built the backend with NestJS, Prisma and PostgreSQL: 23 modules and 119 data models covering orders, wallets, settlements, refunds, contracts, promotions, support, reviews and agent commissions.
- Integrated ZATCA (Fatoora) e-invoicing with admin-managed connections, automatic invoice submission, validation and status tracking, in line with Saudi tax rules.
- Integrated the Moyasar payment gateway (cards, STC Pay) with webhooks, reconciliation, settlement breakdowns and one-step refunds that update orders, merchant wallets and notifications together.
- Built the merchant settlement engine: weekly payouts, configurable commissions per payment method, per-store shipping and fee splits on multi-store orders, and Excel/PDF settlement statements.
- Integrated the Mapit shipping API with configurable carrier pricing, a box-packing simulator, waybill PDF generation and recovery when the carrier times out.
- Built REST APIs for the Flutter mobile app, reusing the web checkout and account logic, with paginated lists, server-side filters, database indexes, email-code password recovery and access control for customers, merchants and branches.
- Set up Firebase push notifications that reach each device in the language the user chose there, plus SMS OTP and payment links sent to customers by SMS.
- Added role-based permissions, an audit log with a filter for sensitive actions, merchant suspension rules, protected access to private documents, and digital contract signing for merchants.
- Improved web performance by loading pages only when a link is clicked instead of preloading every link, lazy-loading images, converting uploads to WebP and sharing identical requests. This removed up to 47 background requests per dashboard visit.
- Completed full Arabic/RTL support across the platform, including Arabic numerals and dates, a custom date picker, bilingual emails, invoices and PDFs, and dark mode.
- Built automatic merchant tiers, product import/export, back-in-stock alerts, product comparison and customer blocking per merchant.

Lead Software Developer **10/2024 - 06/2026**

Altadefinizione (Italy, Remote)

Maintain and develop a marketing system, admin dashboards and streaming platforms, covering both front end and back end with PHP, Laravel, Vue.js, Inertia.js and React.js. Manage MySQL databases, build web scraping tools, and keep applications tested and backed up.

- Delivered over 50 successful Php, Laravel projects, achieving 95% customer satisfaction.
- Increased system performance by 30% through effective database optimization.
- Usage of Redis and Cache mechanism to increase performance of website by 60%. Website load time comes down from 2 seconds to 120ms.
- Implemented a secure backup process for database which avoids the data loss incidents 40%.
- Spearheaded the development of a Streaming Platform which resulted in a 24% improvement in sales reporting accuracy.
- Built production AI chat agents with Python, LangGraph, FastAPI, and Docker.

Software Developer **02/2020 - 06/2023**

Devy (Mexico, Freelance)

Responsible to Develop Web app using React.js, Electron.js. and Mobile app using ionic. Both Web app and mobile app has funcitonality to work both online and offline. For this feature I used PouchDB.

- Online and Offline feature which solved the core problem of that area end up aquiring more customer by 20%.
- Integration with socket.io for realtime tracking on Google Maps for Drivers and Managers which increased customer satisfaction by 29% according to company records.
- Collabrated with workers on ground which increase their confidence on the system and company generated 20% more revenue from their competetors.

Software Developer **07/2023 - 08/2024**

ColdXpress (Lahore, Pakistan)

Built invoicing modules with PHP, Laravel, Blade and Vue.js. The system calculates weekly invoices for every customer from location, distance, suburb, orders and assigned rates, uploads them to Xero and emails them to customers automatically.

- Due to accuracy of Invoices and easiness of getting invoice every week, company onboard 25% more customers.
- Wrote optimized Laravel code to reduce the query time and increase page load performance by 30%.
- Led a database normalization project that reduced data redundancy by 40%.

Projects

Altadefinizione Streaming Platform (Tech Lead)

Tech Stack: PHP, Laravel, Vue.js, React.js, Node.js, Inertia.js, Redis, MySQL, Nginx, Cloudflare, Linux, MySql, Hetzner

- Led the development and maintenance of a high-traffic movie streaming platform serving over 2.4 million users.
- Built scalable backend APIs, admin dashboards, and content management tools.
- Integrated CDN, media delivery, search, and monitoring solutions to improve reliability and performance.
- Managed Linux servers, deployments, backups, and production infrastructure.

Keeld – Multi-Vendor Marketplace & Payments Platform (Lead Full Stack Developer)

Tech Stack: NestJS, Next.js 16, React 19, TypeScript, Prisma, PostgreSQL, TanStack Query, Tailwind CSS, Flutter, Firebase, Moyasar, ZATCA, Docker, Caddy, Puppeteer, Playwright

- Built a marketplace with separate admin, merchant, branch, agent and customer areas, available on the web and on Android/iOS.
- Built payment links, checkout, refunds and wallets, with every amount reconciled against Moyasar and ZATCA-compliant invoices.
- Generated bilingual PDF invoices, waybills and settlement statements, plus Excel exports for finance teams.
- Deployed with Docker Compose behind Caddy, with database backups and migrations.

Xdock (Senior Fullstack Developer)

Tech Stack: PHP, Laravel, Blade, Redis, MySQL, Apache, Linux, MySql, AWS

- Developed an automated invoicing system handling complex pricing rules based on locations, suburbs, customer rates, and deliveries.
- Built 40% of system modules and automate them.
- Integrated with Xero Accounting to automatically generate and send weekly invoices.
- Enabled uninterrupted operations in remote areas with unreliable internet connectivity.

EDUCATION

Software Engineering **02/2016 - 02/2020**

COMSATS University Lahore
